

PATRICK SAADE

AI Engineer | Applied AI & ML Systems

Paris, France • 0033676756853 • patrick-saade@outlook.com • [LinkedIn](#)

PROFESSIONAL SUMMARY

AI Engineer with 8+ years of engineering experience, including 3+ years building production-grade AI systems end to end. Specialised in LLM applications, agentic workflows, RAG, NLP, and AI system design, with strong hands-on experience across backend development, data systems, and deployment. Combines technical depth with consulting and delivery leadership across government, healthcare, and enterprise environments.

CORE SKILLS

AI / ML: LLMs, Agentic AI, Retrieval-Augmented Generation (RAG), NLP, Machine Learning, Deep Learning, Time Series

Data & Infrastructure: PostgreSQL, Vector Databases, Docker, Kubernetes, AWS, GCP, MLOps

Architecture & Leadership: System Design, AI Solution Architecture, Consulting, Technical Leadership, Project Scoping

Programming: Python, SQL, FastAPI, APIs, Backend Engineering, React

Frameworks & Tools: PyTorch, OpenAI, Hugging Face, LlamaIndex, LangGraph, MLflow, Git, Make

LANGUAGES

French — Native • **English** — Professional • **Arabic** — Professional

EDUCATION

Master of Science in Artificial Intelligence Systems

Jun 2025

Paris, France

EPITA: Ecole pour l'informatique et les Technologie Avancées

Bachelor of Science in Management Information Systems

Jun 2020

Beirut, Lebanon

USJ : Université Saint Joseph de Beirut

PROFESSIONAL EXPERIENCE

AI Engineer | Zaka / MadeBy

Dec 2025 – Present

Beirut, Lebanon - Remote

- Built an AI-powered application for WorkedPlace, owning the React frontend, FastAPI backend, and OpenAI integration.
- Built an internal Zoom meeting bot that joins meetings, records audio, stores files on AWS, and triggers a containerized AI pipeline for transcription, diarization, summarization, and email delivery.
- Designed technical content and practical automation use cases for the Certified AI Consultant program, including Make-based workflows for email classification, CV parsing, job-description matching, candidate ranking, and WhatsApp chatbot automation.
- Delivered AI training in French for Visa in Morocco on Microsoft Copilot 365 and Copilot Studio, combining technical content creation, live demonstrations, and hands-on workshops.

Senior AI Consultant (Part Time) | GlobeMed Solutions Health Insurance

Mar 2025 – Present

Beirut, Lebanon - Remote

- Lead applied AI initiatives across Bahrain and KSA, defining project scope, technical strategy, and delivery roadmaps for claims anonymisation, document extraction, and translation use cases.
- Own solution design decisions across tooling, architecture, and implementation approach, translating healthcare business needs into practical AI systems.
- Supervise junior engineers while remaining hands-on in project structuring, technical design, and delivery oversight.

AI Engineer | Inheaden - Ministry of Human Resources and Emiratization**Mar 2025 – Dec 2025***Dubai, UAE - Hybrid*

- Acted as one of the AI team leaders on a major UAE government transformation project, owning the architecture and implementation of core AI modules for MoHRE.
- Designed and delivered a forecasting automation platform that interprets user inputs and Excel files, extracts statistical and metadata signals, and combines deterministic tools with LLM fallback for analytical output.
- Owned the end-to-end architecture and implementation of a chat-with-database system over a national-scale UAE workforce database, leveraging RAG, agentic workflows, document ranking, and tool calling to deliver context-aware responses with fallback and recovery logic.
- Worked closely with analysts, data engineers, and government stakeholders to translate complex requirements into scalable AI systems for production use.

Machine Learning Engineer | GlobeMed Solutions Health Insurance**Sept 2024 – Mar 2025***Beirut, Lebanon - On Site*

- Designed and delivered a multilingual NLP translation system using MarianMT, Hugging Face, and PyTorch for French, Italian, and Romanian, improving internal translation workflows through beam search, confidence scoring, and semi-continuous learning with BLEU and BERTScore evaluation.
- Improved workflow efficiency by 40%, scaled training data from 1K to 15K records, and improved model performance by 22%, strengthening output quality despite imperfect domain data.
- Built an entity resolution solution to map records between legacy and new systems, reducing debugging time by 50% and significantly accelerating cross-system data reconciliation.

AI Engineer | Augment Digital Facilities Services**Sept 2023 – Jun 2024***Luxembourg, Luxembourg - On Site*

- Built a text-to-SQL chatbot and a RAG-based assistant over user manuals, improving access to structured and unstructured internal knowledge.
- Developed the supporting vector database, LangGraph-based orchestration, API testing workflows, and technical documentation to improve reliability and knowledge transfer.

Machine Learning Engineer Intern | Quantmetry - Capgemini Invent**Sept 2022 – May 2023***Paris, France - On Site*

- Worked on MLOps and AI infrastructure initiatives, automating the provisioning of AWS GPU EC2 environments for data scientists using Terraform and Ansible with secure SSH access and reproducible setup pipelines.
- Contributed to scalable ML training and deployment architecture by integrating Kubeflow with AWS and GCP, and building an inference-serving setup with Seldon and Kubernetes for production-style A/B testing.
- Delivered technical documentation and internal knowledge-sharing materials to support future AI platform and inference projects.
